

Mohgaon, Wardha Road, Nagpur - 441 108
An Autonomous Institute

DEPARTMENT OF ELECTRICAL ENGINEERING

B.Tech. Electrical Engineering VII Semester

Syllabus

From Academic Year 2024-25

(An Autonomous Institution Affiliated to RTM Nagpur University, Nagpur)

SCHEME OF INSTRUCTION & SYLLABI

Programme: Electrical Engineering

Scheme of Instructions: Final Year B. Tech. in Electrical Engineering

Semester - VII

	Course Outcomes	CL
BEE4701.1	Understand basic terminology of Protective relaying, different types of faults & components used in power system protection.	2
BEE4701.2	Apply overcurrent protection schemes for medium voltage lines.	3
BEE4701.3	Apply distance protection schemes for high voltage lines.	3
BEE4701.4	Analyze protection schemes used for protection of Generators, Transformers & Motors.	4
BEE4701.5	Comprehend switching phenomenon and working of circuit breakers.	4

oduce the Load Fored	asting, Estimation components & tech	hniques for load p	rediction.		
oduce the Unit Comn	itment Problem				
erstand the solution n	nethods of economic dispatch and state	tic state estimation	n.		
	Course Contents			Hours	
Unit I Estimation of periodic components – Estimation of Stochastic components: Time series approach – Auto- Regressive Model, Auto-Regressive Moving – Average Models – Kalman Filtering Approach – On-line techniques for non-stationary load					
Unit II Unit Commitment: Constraints in unit commitment – Spinning reserve – Thermal unit constraints – Other constraints – Solution using Priority List method, Dynamic programming method – Forward DP approach Lagrangian relaxation method – adjusting					
Unit III Generation Scheduling: The Economic dispatch problem – Thermal system dispatching with network losses considered – The Lambda – iteration method – Gradient method of economic dispatch – Economic dispatch with Piecewise Linear cost functions – Transmission system effects – A two generator system – coordination equations – Incremental losses and penalty factors-Hydro Thermal			(9)		
Power System Control: Review of AGC and reactive power control -System operating states by security control functions – Monitoring, evaluation of system state by contingency analysis – Corrective controls (Preventive, emergency and restorative) - Energy control centre – SCADA system – Functions – monitoring, Data acquisition and controls – EMS system.					
Unit V State Estimation: Maximum likelihood Weighted Least Squares Estimation: - Concepts - Matrix formulation - Example for Weighted Least Squares state estimation; State estimation of an AC network: development of method - Typical results of state estimation on an AC network - State Estimation by Orthogonal Decomposition algorithm. Text Books					
	State Estimation: Concepts - Matrix estimation; State estimation algorithms.	cheme 3 Hrs./week 1 Hrs./week	State Estimation: Scheduling: Power System Control: Review of AGC and reactive power control gualition and controls – Emgs system.	S Hrs./week 1 Hrs./week

---	---

	Course Outcomes	CL
BEE4705.1	Illustrate in-depth understanding of Load Forecasting.	3
BEE4705.2	Solve the problems related to the economic dispatch of power, plant scheduling, and unit commitment.	4
BEE4705.3	Analyze various types of methods to understand the solution of economic dispatch and static state estimation.	4
BEE4705.4	Identify and explain the different methods of control and compensation involved in the operation of power systems.	3
BEE4705.5	Apply the State Estimation to AC network by different Algorithm.	3

1	1 To gives the signal processing methods and transformation techniques required for all electrical engineering related courses.				
2	To give	es concepts of digital signal processing algorithms used in real time environment.			
3	To give filter.	res basic understanding of analog and digital filter realization techniques and importance of			
Course Contents				Hours	
Introduction to Digital Signal Processing: Introduction to Digital Signal					
		Processing: Total Energy, Average Power Calculation, Discrete Time Signals &			
Unit I		Sequences, Linear Shift Invariant Systems, Stability, and Causality.			
3 To gives basic understanding of analog and digital filter realization techniques and important filter. Course Contents Introduction to Digital Signal Processing: Introduction to Digital Signal					
Omt 1		Poolization of Digital Filters: Solution of Difference Equations Using 7			

Course Contents		
Unit I	Introduction to Digital Signal Processing: Introduction to Digital Signal Processing: Total Energy, Average Power Calculation, Discrete Time Signals & Sequences, Linear Shift Invariant Systems, Stability, and Causality. Realization of Digital Filters: Solution of Difference Equations Using Z-Transform, Realization of Digital Filters - Direct, Canonic forms.	(9)
Unit II	Discrete Fourier Transforms: DFS representation of periodic sequences, Properties of DFT. Linear Convolution of Sequences using DFT. Computation of DFT: Over-lap Add Method, Over-lap Save Method. Relation between DTFT, DFS, DFT and Z-transform, Fast Fourier Transforms: Fast Fourier Transforms (FFT) - Radix-2 Decimation-in-Time and Decimation-in-Frequency FFT Algorithms, Inverse FFT.	(9)
Unit III	IIR Digital Filters: Analog Filter Approximations - Butterworth and Chebyshev, Design of IIR Digital filters from Analog Filters, Step and impulse invariant techniques, Bilinear Transformation Method, Special transformations.	(9)
Unit IV	FIR Digital Filters: Characteristics of FIR Digital Filters. Frequency response, Design of FIR Digital Filters: Fourier method, Design of FIR Filters: using Window Techniques, Frequency Sampling technique, Comparison of IIR & FIR filters.	(9)
Unit V	Multi-rate Digital Signal Processing: Introduction, Down sampling, Decimation, Up sampling, Interpolation, Sampling Rate Conversion, Applications of Multi Rate Signal Processing. Finite word length effects: Limit cycles, Overflow oscillations, Round –off noise in IIR digital filters, Methods to prevent overflow, Dead band effects, Tradeoff between round off and overflow noise.	(9)

Course Objective:

- To help the students to understand their real self by recognizing different aspects of their self-concept that 1 will lead to an increased self-confidence.
- To train the students for communicating effectively in both formal as well as in informal settings. 2
- To help the students to understand the importance of non-verbal aspects of effective communication. 3
- To help the students to understand Emotion and emotional intelligence, Managing ones' own emotional 4 reservoirs, effective dealing with emotions at work.
- To facilitate the students in understanding the formation and function of group and team and to help them to 5 learn the skills of a successful leader.
- To help the students in understanding and practicing the goal setting process by recognizing the importance of each step involved in goal setting. The activities involved are designed to facilitate their career goal decision making.

Hours Course Contents Each individual has behavior patterns that are shaped by the context of his or her past. Most often, adapting the behavior to the changing context of the reality a person lives in becomes difficult which

may lead to the reduction in personal effectiveness and natural self-expression. The main focus of this course is to equip the students with useful approaches to help in the deeper understanding of self and help individuals empower themselves to be the source of their own growth and development. The

course will help students to learn effective communication skills, Group and team building skills and will help them learn the goal setting process and thus become more effective in achieving their goals.

The broader objective of this course is to make the students aware about the different facets of self and to help them learn skills to strengthen their inner capacities. So that they are able to understand themselves, think and act effectively, to be able to communicate in an effective manner and to learn to lead and to form an effective team..

(08)

The activities to achieve the above objectives can be suggested as follows.

- Motivational lectures
- Group Discussions/activities
- Case Study
- Games/Stimulation Exercises
- Role-Playing Mindfulness training.
